DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-13, drawn to a method of delaying a clock signal for a multiple data rate interface, classified in class 713, subclass 401 (Synchronization of clock or timing signals using delay).
- II. Claims 14-33, drawn to an integrated circuit, classified in class 713, subclass 503 (Correction of skew, phase or rate).

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the process as claimed can be practiced by another materially different apparatus.

A telephone call was made to Matthew Zigmant [Reg. No. 44,005] on 12/09/2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
